Museo Nacional de Ciencias Naturales (CSIC)
José Gutiérrez Abascal, 2, E-28006 Madrid, Spain

Cobos (1986, p. 24) proposed the genus *Paradema* (type species by original designation: *P. picturella* Cobos, 1986). This name is preoccupied by *Paradema* Slater, 1980 in Hemiptera. I want to replace Cobos's name *Paradema* with *Cobosiantha* Alonso-Zarazaga, **nom. nov.**, constructed on the basis of my master and friend's name, and ending *-antha* (from Greek *anthos*, meaning splendour, with end change). Gender is feminine. Type species is then *Cobosiantha picturella* (Cobos, 1896), **comb. nov.**

Unfortunately, Dr. Antonio Cobos's health is so severely damaged that it is impossible to expect him to replace his genus with a new name.

A replacement name for *Argalia* Mulsant, 1863 (Coleoptera, Cerambycidae)

M. A. ALONSO-ZARAZAGA
Dpto. de Biodiversidad y Biología Evolutiva
Museo Nacional de Ciencias Naturales (CSIC)
José Gutiérrez Abascal, 2, E-28006 Madrid, Spain

Mulsant (1863, p. 381) proposed the subgenus *Argalia* (type species by present designation: *Saperda tremulae* Fabricius, 1775) for a division of genus *Saperda* Fabricius, 1775. This name is preoccupied by *Argalia* Gray, 1846 in Reptilia. I here propose to replace Mulsant's name *Argalia* with *Lopezcolonia* Alonso-Zarazaga, **nom. nov.**, named after my good colleague and friend, the Spanish coleopterist Mr. José Ignacio López-Colón (Rivas-Vaciamadrid, Spain). Gender is feminine.

This name is currently used as a separate genus or a subgenus of *Saperda*, according to different authors. The type species is currently considered to be a synonym of *Lopezcolonia octopunctata* (Scopoli, 1772), **comb. nov.** (originally in *Leptura*). The other species included by Mulsant is now *Lopezcolonia punctata* (Linnaeus, 1767), **comb. nov.** (originally in *Cerambyx*).
